## VENTil()

:: CHAIR ME

Webb Associates, a London based Design Consultancy, has over 25 years of experience, knowledge and skill, based within the constraints and demands of mass production, particularly in the furniture industry. The designs it creates are specifically tailored to a client's needs, providing solutions that are commercially successful. Design ideas that resolve the restrictions imposed by function, ergonomics, market demands and manufacturing processes, to create economic solutions with visual and technical innovation, are typical of the problems that Webb Associates embrace. Since 1989 RWA have developed close and long term relationships with a variety of different size businesses, initially in the UK, extending into Europe, and more recently America and the Far East.

The design of Ventilo for Chair Me was created by Roger Webb and David Lancaster. Roger Webb is graduate of and The Royal College of Art. He originally worked for Robert Heritage, before co-founding the Design Consultancy, D+D in 1981. Roger Webb Associates was created in 1989 and has since had many products exhibited at all the global Trade Exhibitions from Guangzhou, Dubai, Milan, Cologne and Chicago. David Lancaster is a graduate of University of Northumbria and BCUC. Initially David worked freelance prior to joining Roger Webb Associates in 2001. Their collaboration has produced a wide variety of furniture designs that have been internationally successful.

The most important criteria in Ventilo is that it should be easily and intuitively adjustable to the user's size and weight, making it not only comfortable but provide the correct ergonomic posture support throughout the working day. In conjunction with this, the overall concept is a chair that facilitates customisation and choice. This is realized through the option of fitting a number control mechanisms which provide different movements, a variety of backrests in either mesh or upholstery, armrests and arm pads with variety of adjustments. In addition to this bases can be specified to be in either nylon. or polished aluminium. However, given these choices, the essential overall, visual identity and aesthetics of the chair is maintained, whatever components that are selected.
